

Railway Management **System**

Team Details :

Medam Bhanu Tej - E0320024 (User Registration)
Pamulapati Kirthana - E0320041 (Source and Destination)
Neeraj Boyapati - E0320031 (Trains Availability)
Koye Harshitha - E0320039 (Ticket Booking)
Ponnuru Sai Venkatesh - E0120026 (Ticket Copy with Amount)

Abstract :

This Management System is for the purpose of Train ticket Booking, where first the user will have to enter their personal details like their Name, Gender and Phone Number. Then they will start searching for their required tickets and available trains by entering their source and destination. Once they enter their source and destination the available trains on that route will get displayed along with its Train Number. Now the user will have to choose the train according to their convenience by entering the train number displayed above. Now they will have to choose the category of tickets that they need along with number of tickets required which will be limited to 6.

Once they complete their selection, The copy of ticket will get printed with all the details of the passenger, train along with the amount to be paid for the booking they have done.

Introduction :

The Railway Management System facilitates the passengers to enquire about the trains available on the basis of source and destination and booking of preferred tickets based on the choice of the user.

List of Modules :

1. User Registration : The User will have to register his/her details into the ticket booking portal with their personal information like their name, gender, and mobile number which will be printed later on in their ticket.

2. Source and Destination : The User once registered into the portal will now have to Start searching for trains based on their source and destination. They will have to enter their Source and Destination in the required column in order to get the details of the available trains.

3. Trains Availability : The details of the required train will get displayed based on the user search of their Source and Destination. The user should then choose the train

according to their convenience by entering the train number.

4. Ticket Booking : The user will have to choose the category of tickets(General , AC) along with the number of tickets that they need and it will then direct the booking to the GUI interface.

5. Ticket Copy with Amount : This prints a copy of a ticket in the GUI interface with all the user information which were given during the time of registration along with the details of the train that they will be traveling in and the amount of ticket that they needs to be paid by them.

SQL Database :
